

**Project Name:****Functionalities:**

List the functionalities for each module of the software and give a short description (as precise as possible) of each functionality. Try to be very specific here.

You may subdivide according to different modules (sales, purchase, reportings) or admin panel, client, general viewers, etc. whenever applicable.

Advanced features like parameterization and insight generating features should be mentioned separately.

**Motivation of the Project:**

Why will people use it? How may it help them beyond existing basic systems?

**Tools and Technologies:**

Briefly discuss the implementation specifics such as languages and framework used, data management etc.

**Work Schedule:**

Make a week by week schedule of the development process. The workload of each week should be uniform and the project must be scheduled to be finished by 13th week.

**User Interface:**

Attach a draft sketch of the user interfaces so that it reflects the project functionalities clearly.

It should include input screens, search screens, report format.
